

Exercise 2

The executive Director at Power Cycle is requesting information on how well on average the orders are being fulfilled from the order date to the time that it is shipped. She would also like to know the average sales amount and the total orders for the year 2019.

1. Create a measure that that will provide a count for unique orders made
2. Create a calculated column or measure that will compute the average days to ship
3. Create a calculated column or measure that will compute the average sales
